

Weekly Plans and Notes (08/09 – 08/13)

- **Weather:** Finally some rain has fallen. The last few days we have received close to an inch of rain and it looks like we have chances everyday next week.
 - The Conditions are still right for Brown Patch and Pythium Root rot to form. If you think that either of these is showing up in your yard you can, reach out to us through a Town Square Request to help you identify it or you can stop by Lowes or Home Depot and pick up a lawn fungicide. For Example:

- **Irrigation:** While walking in the community I am still noticing some major wet spots formed by homeowner irrigation runoff. While it is dry, irrigating to the point of making soft soil is not what you need to do either.
 - Please if you see a zone running for an area getting irrigated for a long period of time please reach out to us on Town Square (under COS Irrigation).
- **Maintenance:** Next week we will be working with Weed Man as they work on Round 4 Turf Treatment.
 - **Edging:** We will be edging the beds next week.
 - **Bush Hogging:** We finished with the main bush parts and will be wrapping up the smaller areas in the next 2 weeks. Please be careful and do not walk in these areas. They are not finished graded and they also have ticks and other wildlife.
- **Turf Application:** Friday, we had Weed Man back out to spot spray a few areas for weed treatment. Round 4 Turf application (weed treatment spray) will begin next week.
- **Pruning:** Next week we will be wrapping up the flowering shrub pruning.
- **Aeration and Over-Seeding:** Aeration and Over-Seeding will be starting up in September. The schedule will be posted before we begin.

[Have a good weekend!](#)
