

Weekly Update: May 9, 2022

Maintenance:

- This week we will be edging the Beds.
- We completed 90% of the mow for the community by this past Friday, May 6. The rest was finished on this past Saturday.

Pine Straw:

- We will be following the pine straw application in the order that it was laid to spray out any weeds that have sprouted back up. The weeds will take about a week to die off.

Turf Retreatment:

- I have been monitoring the community for effective treatment. Some areas are requiring a retreatment and I will give the affected areas a 24-hour notice before the retreatment. The retreatment is being scheduled out for late this week. We will have signage down to show that an area has been treated. Please, keep your pets off those areas for 24 hrs.

Pest Update:

- Lacewing bugs – I have found these bugs on a few homeowners' Azaleas. These are not isolated to one section of the community. They can be found on the underside of leaves, and they cause the leaves to brown out and develop holes. Lacewings are easy to treat with an insecticide like Seven Dust. Above are a couple of products that help in control of Lacewings:
- As with all chemicals: Please read the labels before use!

All schedules provided are weather permitting. The rotation will shift days but remain in the same order. All questions, concerns, and work requests related to landscaping and irrigation must be submitted through the NABR Network website. Ross Broadway, Account Manager, and Brian Lowe, Branch Manager, will review and respond accordingly.

Residents are reminded to reference the Landscape Service Guide on scope of service.
